

Gold-mining tour

Pure gold is a soft yellow metal. Gold is a very heavy metal – for example, a gold ball with diameter of 46 mm is 1 kg weight. It is very malleable – a 3 km wire can be extended from 1 g of gold. Pure gold is so soft that it can be scratched by the nail. Gold has been mined from ancient times. There had been mined 140000 of gold during the whole history of humanity. Gold mining is quite a difficult labor-intensive process. It is better to start a work in morning. Gold-digger's instruments are simple – tray and spade. The technology of washing gold is based on the high density of this metal. Metals of less density are washed out and gold settles down. This kind of gold mining is historically first and it is very cheap as you don't need to build factories but need only tray and spade. Try

yourself as a gold-prospector in Russia. This tour also includes visiting of one of the reserves in Primorsky Territory and fishing. You can catch here taimen, grayling, etc. Enjoy summer in Russia!

SAMPLE OF THE TOUR
